Introduction

This report documents the quality assurance activities performed on the web project to ensure code correctness and standards compliance.

The project integrates front-end technologies including HTML, CSS, and JavaScript.

Validation and testing procedures were systematically applied to all components in order to confirm proper functionality, reliability, and maintainability.

Validation Tools Used

The validation process for this project was carried out using specialized and widely recognized tools, each selected according to the programming language being validated.

These tools were used to ensure code correctness, standards compliance, and adherence to best development practices.

- HTML: W3C Markup Validation Service
<https://validator.w3.org/>
- CSS: W3C CSS Validation Service
<https://jigsaw.w3.org/css-validator/>
- JavaScript: ESLint
<https://jstontable.org/javascript-validator>

Each tool was applied independently to its corresponding source files, and validation was repeated until all reported issues were resolved.

HTML Validation Results

Page Name: index.html

- Status: Not Valid HTML5
- Errors: 1
- Warnings: 3
- Screenshot File:

- Warning** The `navigation` role is unnecessary for element `nav`.
[From line 31, column 17; to line 31, column 112](#)
`<nav class="primary-nav" id="main-navigation" role="navigation" aria-label="Primary Navigation">`
- Error** The `aria-label` attribute must not be specified on any `div` element unless the element has a `role` value other than `caption`, `code`, `deletion`, `emphasis`, `generic`, `insertion`, `paragraph`, `presentation`, `strong`, `subscript`, or `superscript`.
[From line 245, column 25; to line 245, column 81](#)
`<div class="news-ticker" aria-label="Latest news ticker">`
- Warning** Section lacks heading. Consider using `h2` - `h6` elements to [add identifying headings to all sections](#), or else use a `div` element instead for any cases where no heading is needed.
[From line 294, column 17; to line 294, column 67](#)
`<section class="ticker-content" aria-live="polite">`
- Warning** Consider using the `h1` element as a top-level heading only — or else use the `headingoffset` attribute (otherwise, all `h1` elements [are treated as top-level headings by many screen readers and other tools](#)).
[From line 75, column 17; to line 75, column 20](#)
`<h1>Welcom`

How We Addressed Them:

1. Removed the navigation role from `<nav>` tags.
2. Corrected heading levels to ensure `<h3>` follows `<h2>` without skipping levels.

3. Removed aria-label from <div> elements to follow standard ARIA rules.
4. Limited the page to a single <h1> for better screen reader compatibility.

After:

Document checking completed. No errors or warnings to show.

Conclusion

The quality assurance and validation procedures applied to this web project confirm that all components perform as intended.

HTML pages adhere to HTML5 standards, CSS stylesheets are correctly structured, and JavaScript scripts execute without errors.

These measures ensure consistent functionality across browsers, enhance maintainability, and demonstrate compliance with professional web development practices.
